**BEST PRACTICE (1)- (2017-18)**

***1. Title of the practice: Voter Awareness Programme***

**2. Goal:** Through this programme we aim at voter awareness creation and we convince the students about the importance and value of votes and encourage the students to cast votes by all means

***3. The Context***

In India youth are very careless about using their franchise or right to vote. They only blame the politicians for their miserable condition. They think that the politicians are not faithful. They do not think that they can change the political system by casting their votes. Ignorance and illiteracy of our backward region here risk the chance of misusing the franchise. Considering these issues our college arranges programmes on these issues by inviting resource persons.

***4. The Practice***

The institution has organized various programmes for creating awareness about voting in our society & students. We conducted some programmes on voting procedure and organised lectures of officials from the election department. We appointed BLO and also had voter registration form filled by the students.

***5. Evidence of Success***

By implementing this practice students became aware of the election system. Students above 18 years filled voter registration forms. Students became aware of choosing suitable candidates in the election. By implementing these practices we have achieved our targets of changing the mind-set of the students and attracting them towards the concept of development through democracy.

***6. Problems Encountered and Resources Required***

Lack of proper guidance by the officials in election department to the students. Some students are careless about it. These are some of the limitations or problems we come across while implementing this best practice. But because of the support of the students we could overcome the problems in general

***7. Notes***

In many colleges, students are careless about their power to vote. It is necessary to encourage them for the registration of their names in the voter list.
